

BENEFITS OF TERRA LANA WOOL DAGMAT®

NZ'S PERFECT WEED & GROUND MATTING

MADE IN NZ

Manufactured in our Christchurch facilities for quality assurance, dependable supply and low environmental impact

LOCAL WOOL

Sourced directly from local Canterbury farms, reducing transport and adding value to NZ's wool industry and local economy

LESS MAINTENANCE

DagMat is densely needle-felted providing highly effective weed suppression, which reduces weeding and spray maintenance

WATER RETENTION

DagMat absorbs and releases up to three times its weight in water. This can reduce irrigation requirements and assist plant establishment

EROSION CONTROL

DagMat stabilises the ground and reduce erosion by adhering to soil. It has a unique scale-like structure, which catches and filters sediment

NATURAL FERTILISER

As DagMat biodegrades, essential nutrients such as nitrogen and potassium are released to improve soil health and boost plant growth

FROST PROTECTION

DagMat has natural insulative properties that protect tender plant roots from cold and frost damage

CUSTOM ORDERS

DagMat is available in custom widths and lengths, reducing waste and installation time

FIRE RESISTANT

Wool is renowned for its flame-resistant properties—it will only smolder, then self-extinguish
